## JOHNNY WONDER

## Q. "WHAT KEEPS A TRAIN ON THE TRACKS?"

HECTOR MALLARES, OF CANTA, RIZAL, PHILIPPINES, WINS A PRIZE FOR THIS QUESTION.

©1979 United Feature Syndicate, Inc. 12/61

A. Nobody steers a train. A train is steered by the tracks themselves. The wheels of a train have a special shape. Each one has an inside rim called a "flange" that fits just inside the rail. The main part of the wheel rests on the rail as it turns, and the flange keeps the wheel from slipping off the rail. The flange guides the train along the track. Railroad companies build their tracks as nearly level and straight as possible. If tracks must bend, they are laid in a big curve. If a mountain is in the way, the tracks may wind up and over it, or a tunnel may be dug through it.

You can win a World Almanac if your question is selected. Send your name and age to JOHNNY WONDER, c/o this newspaper, P.O. Box 1254, Santa Cruz, CA 95061.
